

# Samlink: Remarkable Savings in Time

Samlink has experienced remarkable savings in time and thus improved its business after starting collaboration with XMLdation. Samlink uses XMLdation Validator service for testing SEPA payments, international payments and XML e-invoices (Finvoices).

Time is crucial for Samlink, which is a supplier for many bank clients in the field of IT banking and related support services. Samlink's clients consist of banks, credit institutions and investment service companies. As a bank service provider, Samlink offers services for over 460 local banks.

- After comparing different service providers and hearing experiences from our peers, XMLdation seemed like the best fit. We value the web-based Validator service. It allows us to have monthly and flexible usage. We have remarkably saved time in testing. This improves our business, states **Petri Tammelin**, Technical Specialist from Samlink.

Changes related to SEPA payments, international payments and XML e-invoices (Finvoice) have been most important to Samlink.

- Our cooperation started with a workshop. After this, XMLdation customized their Validator service for us. The service has been fine-tuned when needed – always reliably and fast.

*Internationally operating XMLdation® is specialized in testing all payment-related XML. It offers reliable, efficient, web-based and real-time services and products that speed up ISO 20022 XML migration projects while decreasing costs and saving time.
