The XML Opportunity

Bank and Enterprise to enterprise integration are the big drivers in Enterprise Resource Planning (ERP) systems of today. Corporate managers are looking for smooth and integrated solutions for cash management across their entire value chain. Electronic invoicing is quickly becoming the norm for large corporate customers, soon to be followed by ePayments, and electronic account and status report.

Corporate customers are looking for European and international standards to ease the migration and decrease the number of tailored solutions between the counterparties. The Single European Payments Area (SEPA) will diminish the hassle in intra-European cash management, while XML is becoming the global standard for monetary transactions.

Despite the standardization, there will be a lot of national and domain-specific variants, and every roll-out project will have to solve a lot of compatibility issues and facilitate professional validation before going live.

We Enable New Business For You

At XMLdation we are right in the middle of this exciting development through active participation in various standardization bodies. What's more, we have packetized bank integration related testing procedures into an easy to use validation service.

Our aim is to help you as a systems integrator to make the most of the ongoing revolution. We can help you to become extremely efficient through removing time-consuming tasks like live communication with various parties, banks' slow response times in testing, and bank-specific validation procedures. With our service, validation becomes a standardized service, where the banks are always open for testing, and reporting is immediate.

As a result, you increase the throughput and profit of your projects.

Your Best Partner for New Business Opportunities

Our mission is to help you master the XML megatrend to grow your business.

"XMLdation's validation services have helped tremendously in speeding up our projects – as a result we're saving time and money while decreasing the consultant risk."
